EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Anand P. Narayan on 05/19/08.

1. The application has been amended as follows:

In claim 1, line 3, "stream a" has been changed to "stream in a receiver a", line 5, "stream an" has been changed to "stream in the receiver an", line 8, "matrix having" has been changed to "matrix in a cancellation controller having".

In claim 19, line 2, "signal;" has been changed to "signal in a searcher;" , line 3, "signal;" has been changed to "signal in a finger;" , line 5, "of at least" has been changed to "in a cancellation controller of at least", line 8, "matrix comprising" has been changed to "matrix in the cancellation controller comprising".

In claim 31, line 2, "path;" has been changed to "path in a receiver;" , line 3, "path;" has been changed to "path in a receiver;" , line 4, "identifying" has been changed to "identifying in a cancellation controller", line 20, "forming an interference matrix" has been changed to "forming an interference matrix in the cancellation controller".

In claim 34, line 2, "desired signal" has been changed to "desired signal in a receiver", line 3, "signal path" has been changed to "signal path in the receiver", line 3, "signal path" has been changed to "signal path in a cancellation controller", line 5,

Art Unit: 2611

"interference matrix" has been changed to "interference matrix in the cancellation controller", line 12, "determining a projection" has been changed to "determining in the cancellation controller a projection".

2. In the specification on page 17, line 24, "Application Serial No. _____" has been changed to "Application Serial No. 10/686,829".

3. The following is an examiner's statement of reasons for allowance:

Prior art does not teach or suggest receiving as part of a signal stream a desired signal path having symbols of a first length; receiving as part of said signal stream an interfering signal path having symbols of a second length, wherein said second length is less than said first length; and forming an interference matrix having at least three interference vectors, wherein a first of said interference vectors includes a representation of at least a portion of a first interfering symbol included in said interfering signal path, wherein a last of said interference vectors comprises a representation of at least a portion of a second symbol included in said interfering signal path, and wherein an intermediate one of said interference vectors comprises a representation of all of a third symbol included in said interfering signal path; where the interference matrix is used to substantially reduce interference from the signal stream (emphasis added),

wherein at least three symbols of the first channel of said interfering signal at least partially overlap said signal of interest; and forming an interference matrix

comprising said estimate of at least a portion of each symbol of said interfering signal that overlaps with a symbol of interest; where the interference matrix is used to substantially reduce interference contributed by the said interfering signal (emphasis added),

a cancellation controller, operable to form an interference matrix comprising at least a first interference vector, an intermediate interference vector, and a last interference vector, wherein said first and last interference vectors each correspond to a partial interfering symbol included in a first channel of said interfering signal path, wherein said intermediate interference vector contains a number of non-zero values corresponding to a complete interfering symbol included in said first channel of said interfering signal path (emphasis added), and

means for forming at least three interference vectors for each portion of a symbol in said interfering symbol path that overlaps with a desired signal; and means for calculating a projection of a reference signal that is orthogonal to a matrix of vectors comprising said at least three interference vectors (emphasis added).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
